

Wireshark HTTP Filters

General HTTP

- Show all HTTP:
`http`
- HTTP requests only:
`http.request`
- HTTP responses only:
`http.response`
- GET requests:
`http.request.method == "GET"`
- Filter by URI containing text:
`http.request.uri contains "[text]"`

Narrow by IP / port

- Packets involving the CTF server IP:
`ip.addr == 198.51.100.20`
- Traffic to/from port 80:
`tcp.port == 80`
- Combine (server IP + HTTP):
`ip.addr == 198.51.100.20 && http`

Find TCP handshake packets

- SYN packets (new connections):
`tcp.flags.syn == 1 && tcp.flags.ack == 0`
- SYN-ACK (server replies):
`tcp.flags.syn == 1 && tcp.flags.ack == 1`
- Complete handshake pair (either side):
`tcp.flags.syn == 1`

Search by TCP stream

- If you identify a TCP stream number N (from packet details):
`tcp.stream == N`

HTTP header / cookie fields

- Packets that include a Set-Cookie header:
`http.set_cookie`
- Packets that include cookies in requests:
`http.cookie`

TCP flags quick filters

- FIN packets: `tcp.flags.fin == 1`
- RST packets: `tcp.flags.reset == 1` (or `tcp.flags.rst == 1`)
